Kenco’s Thermal Differential Switches are designed for a wide range of flow and level applications. These switches can be used to detect either the overall liquid level or a liquid – liquid interface. They can also be used to detect a specific flow rate or a flow/no flow condition in liquids and gasses.

**FEATURES**
- Level and Interface detection
- Flow detection for Liquids and Gasses
- Fast Response Time
- No Moving Parts
- Temperature Compensation

**APPLICATIONS**
- Level detection
- Nitrogen Flow detection
- Low Flow Monitoring
- Liquid-Liquid Interface detection
- Foam-Liquid Interface detection
- Pump Protection
- Flare Systems

**INDUSTRIES**
- Chemical
- Petroleum
- Water / Wastewater
- Pharmaceutical
- Pulp & Paper
- Power
- Aerospace

**PRINCIPLE OF OPERATION**
The sensor consists of (2) Resistance Temperature Detectors (RTDs). One RTD measures the temperature of the fluid around the sensor. The other RTD is self-heated. This provides a temperature differential between the two RTDs.

In a Level application, the thermal conductivity of the liquid is higher than the gaseous layer above the liquid. When the RTDs make contact with the liquid, there is a cooling effect with the liquid absorbing the heat from the heated RTD. This reduces the temperature differential between the two RTDs, and causes the relay to change state. When the liquid level drops below the sensor, the temperature differential increases, causing the relay to reset. This will also work in a liquid-liquid interface when the two liquids have different thermal conductivity (ex. oil and water).

In a Flow application, there is a temperature differential during a no-flow or low-flow condition (the actual setpoint is adjusted during the calibration procedure). As the flow rate increases, the temperature differential between the RTDs decreases, causing the relay to change state. When the flow rate decreases, the temperature differential increases, causing the relay to reset.
**Product Specifications**

**Ordering Guide**

- Model: KTDL = Level Switch
  - KTDF = Flow Switch
- Process Connection:
  - 050 = 1/2” NPT
  - 075 = 3/4” NPT
  - 100 = 1” NPT
  - 3A1 = 1 1/2” Sanitary
  - RA1 = 1” 150# ANSI Flange
  - RA2 = 2” 150# ANSI Flange
  - RB1 = 1” 300# ANSI Flange
  - RB2 = 2” 300# ANSI Flange
- LFS = Low Flow Sensor
- SPL = Special Connection
- Sensor Material:
  - S6 = 316L SS
  - S4 = 304 SS
  - SL = 304L
  - HB = Hastelloy-B
  - HC = Hastelloy-C
  - IO = Inconel 600
  - MN = Monel
- Configuration:
  - LE = Integral Mounting
  - RE = Remote Mounting
- Options:
  - 00 = No Options
  - RT = RTD Output
  - LT = Live Tap
  - CE = CE Approved
  - EN = Extended Neck
  - HT = *High Temp (850°F)
  - MT = *Medium Temp (572°F)
- Insertion Length:
  - 002.00 = Standard
  - 002.50" - 120.00" = (Optional - KTDL)
  - 002.50" - 012.00" = (Optional - KTDF)
- Insertion Length:
  - XW = Explosion-proof Window
- Input Power:
  - 110 = 110Vac
  - 220 = 220Vac
  - 24D = 24Vdc
  - 24A = 24Vac
- Example Model Designation: KTDL-050-S6-002.00-110-LE-00
APPLICATION EXAMPLES

SPECIAL SENSORS

LOW FLOW SENSOR
- Developed for low flow gas and liquid applications where reliability and durability are mandatory
- Very low internal volume so that sample times are short and system response remains fast
- All welded stainless steel construction
- ¼” Female NPT process connections
- Operating temperature range: -100°F to 392°F

SANITARY SENSOR
- 3-A Certified
- Designed for use in food, beverage, dairy, and pharmaceutical applications
- Standard insertion length is 2.5”. Contact Kenco for custom lengths.
- Operating Temperature Range: -100°F to 392°F
- Maximum Working Pressure of 1500 psig
ADDITIONAL APPLICATIONS

**Low flow monitoring in food processing plants**

Different lines are used to blend ingredients. If one of these lines becomes blocked, the product can be ruined. By monitoring the flow in each of the blending lines, a Kenco Model KTDF can prevent product loss.

**Monitoring flow through heat exchangers**

The Kenco KTDF flow switch can monitor the flow and activate a shutdown at a specific low flow, or no flow condition in the exchanger.

**Eye wash station monitoring**

The Model KTDF can be used to monitor the condition of an eyewash station. When the station is used, a signal is sent to notify emergency medical personnel.

**Diesel Fuel / Water Interface Detection**

Over time, fuel tanks can accumulate a significant amount of water. This water reduces the capacity of the tank. A Kenco Model KTDL can be used to detect the water, turn on a pump to remove the water and shut off the pump to prevent pumping the diesel fuel.

**Flare Systems**

A Kenco KTDF flow switch can be used to detect which vessel is emitting to the flare line. It can also be used to activate the flare igniter when gas flow is present, or to detect if the flare does not ignite in the presence of gas flow.
