

30000 SERIES PUMP SETTING GAUGES

APPLICATION

The Kenco PSG-30,000 series Pump Setting Gauges utilize individually calibrated scales based on the inside diameter of the sight tube to provide an extremely accurate reading when calibrating the flow rate of a chemical metering pump. Gauge can also be used to periodically monitor pump performance, accuracy of a chemical injection system, or as a primary containment reservoir for liquid pumped into a chemical injection system.

OPERATING PRINCIPLE

To check the flow rate of a chemical pump, isolate the chemical in the storage tank from the Pump Setting Gauge. Keep the isolation valve closed and observe the number of scale markings the liquid level passes in one minute. This will give you the actual chemical pump flow rate. If the rate is not the one desired, make an adjustment to the chemical metering pump feed rate and conduct as many one minute tests as necessary to achieve the chemical feed rate desired. The Pump Setting Gauge sight tube has a decal with (2) calibrated scales. The scale on the left side is a volume scale in milliliters (ML). In a one minute test, the scale will read the pump rate in milliliters per minute. The scale on the right side will depend on the desired flow rate unit of measure; i.e. Gallons per Day (GPD), Gallons per Hour (GPH), Liters per Day (LPD), Liters per Hour (LPH), U.S. Gallons by Volume (GBV) or Liters by Volume (LBV).

GAUGE FEATURES

- Direct-Reading Volume/Rate scales on the sight tube are individually calibrated to the inside diameter of the glass to maintain a high level of accuracy.
- Scales are highly visible and labeled with well-sized characters for easy reading against all liquids.
- Six scale options are available: Gallons per Day (GPD), Gallons per Hour (GPH), Liters per Day (LPD), Liters per Hour (LPH), U.S. Gallons by Volume (GBV) and Liters by Volume (LBV). Each scale option includes a volume scale in milliliters (ML).
- Gauge sizes cover a broad range of flow rates from 16 Gallons per Day (60.57 Liters per Day) to 1440 Gallons per Day (5450.99 Liters per Day).
- Sight tube on all models is made from borosilicate glass.
- Clear thermoplastic sight tube shield for impact resistance is standard on all models.
- Close fit between inside diameter of sight tube shield and end plates enhances the structural stability of gauge and helps keep out unwanted contaminants between sight tube and shield.
- Lower end plate has drain hole(s) to prevent condensation build up.
- End plates are available in 316 stainless steel, PVC, CPVC, Alloy 20 and Hastelloy C-276. Other materials available upon request.
- Engineered PTFE envelope sight tube gasket ensures compatibility with most liquids and has an integral isolation barrier to prevent glass from making contact with end plates. Fluorocarbon filler provides a constant load on gasket to ensure a positive seal.

SIGHT TUBE GASKET DESIGN

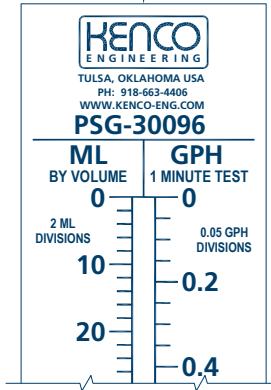

GAUGES WITH S6 / PVC END PLATES
(EXCEPT PSG-31440) ARE SUPPLIED WITH A
3/8" OD TUBE X 1/4" NPT VENT TUBE CONNECTOR

GAUGES WITH VENT TUBE CONNECTOR

ALL GAUGE CALIBRATION SCALES
HAVE A VOLUME SCALE IN
MILLILITERS ON LEFT-HAND SIDE

CALIBRATION SCALE ILLUSTRATION

GAUGES WITH CPVC / A20 / HC END PLATES AND
ALL PSG-31440 GAUGES ARE NOT SUPPLIED WITH
A VENT TUBE CONNECTOR

GAUGES WITHOUT VENT TUBE CONNECTOR

*Model PSG-31440 and gauges constructed with CPVC / A20 / HC end plates are not supplied with a vent tube connector.

Note: 3/8" OD tube x 1/4" NPT vent tube connector is 316 S.S. on gauges with S6 end plates and polypropylene on gauges with PVC end plates.

**Inlet port sizes and types shown are standard, but other sizes and types, such as flanged, are available upon request.
